

Stealth Scanner remains very easy to operate as only 1 button is required to perform ground scanning in all 3 modes. First mode is long range; it allows you to step in the direction of strong electromagnetic field disruption up to 50 meters around. Scanning mode displays voids and metals in real time on the tablet PC; no need for a remote computer to analyse data ! Third mode is the sonar; it simply gives you the depth of the target.

AS SEEN ON TV

Oak Island TV show - Treasure hunting in France and Virgin Islands - Coin shooting in Pakistan - Inca relic search in Peru

DRS ELECTRONICS was founded in GERMANY in 2012 to bring a new technological approach to the metal detecting market. We offer innovative devices with technologies used for instance in military and industry fields: gradiometer, resistivity measurement units, ground penetrating radars, vlf and pulse detectors...some of our devices even combine all of those !

DRS products are used worldwide. You may learn more about all our range at one of our distributor facility or on our website: www.drselectronics.eu

STEALTH SCANNER 3D

GERMAN TECHNOLOGY FOR TREASURE HUNTERS

STEALTH SCANNER 3D

Our 3D STEALTH SCANNER is a world premiere. It's the first "invisible" device that allows you to find cavities, voids, tunnels and metals up to several meters below your feet thanks to 8 sensors hidden in a jacket. It also features a long range mode that allows to step in the direction of strong electromagnetic field disruption up to 50 meters around.

The ground scans provided by the gradiometer are displayed via a 3D software on a last generation tablet PC.

Thanks to the Stealth Scanner jacket, you will remain completely invisible while you scan the ground for voids, tunnels or relics while other treasure hunters will get noticed.

Stealth Scanner includes 8 super geophysical sensors (SGS70) that fit in a jacket!

Stealth Scanner features custom made software that displays targets in 3D with several views available
